

# TRAFFIC NOISE INFORMATION

**A Traffic Noise Analysis has been completed to study the existing and future traffic noise conditions.**

**A final decision on potential barrier walls will be made following public feedback and final design.**

## **IDENTIFICATION**

Noise receptors, gathering places, and potentially noise-sensitive areas are identified throughout the Delemar Highway Corridor.

## **MEASUREMENT**

Traffic noise data is collected from several locations throughout the project corridor. Existing and future traffic noise is modeled at each identified receptor (residence).

## **ANALYSIS**

Noise abatement solutions are considered to determine locations that meet the criteria of “feasible and reasonable” for abatement such as noise barrier walls.
